

Farm - 3

Learning Intentions

Students group living things based on observable features and distinguish them from non-living things.

Students use their experiences to identify questions and make predictions about scientific investigations.

Daradgee Specific Elaborations

This experience may require students to:

- recognise characteristics of a variety of farm animals eg. how they feed, grow, reproduce, move and survive
- make predictions about events that can occur in our farm environment eg. dog attacks, snake predation, dominance/pecking order
- use digital cameras to record observable features of the farm animals and plants
- represent observations and experiences through digital photography
