

# Farm - 6

## Learning Intentions

Students describe and predict the effect of environmental changes on individual living things.

Students follow procedures to develop investigable questions and design investigations into simple cause-and-effect relationships

## Daradgee Specific Elaborations

This experience may require students to:

- observe how the DEEC farm environment affects the growth and survival of farm animals
- consider the effects of physical conditions eg. excessive heat reduces egg production, incubator temperature may influence gender
- investigate irreversible changes such as composting and worm farming
- explore how reversible changes can be used to recycle materials
- consider how personal and community choices can influence our practices relating to sustainability
- use digital photography to represent and describe observations
